

Party Time

Name _____

Date _____

Andrew is planning a surprise birthday party for his dad. Sixty people will be at the party, and each table will seat 8 people. How many tables does Andrew need?

Answer the question using pictures, words, tables, graphs, and/or symbols.

Andrew has 60 balloons to use for decorating the tables. If he wants every table to look exactly the same, how many balloons will be at each table?

Answer the question using pictures, words, tables, graphs, and/or symbols.
